1. Product introduction

This data booklet deals with CR, CRN, CRNE pumps for high-pressure applications.

A high pressure can be achieved in two ways:

- One pump with frequency-controlled high-speed motor:
 - CRNE-HS, pump sizes 1 and 3.
- Feed pump and high-pressure pump connected in series:
 - CR, CRN, pump sizes 120 to 150
 - CRN-SF, pump sizes 3 to 90.

The high-pressure pump is available in two designs, depending on pump size.

- CRNE-HS and CRN-SF:
The chamber stack is upside-down compared to a CR standard pump.
- CR, CRN:
Standard pump with or without bearing flange.

The pumps described in this data booklet are a CR or CRN standard pump as feed pump connected in series with a larger pump, the high-pressure pump.

For use of other CR pumps as high-pressure pump, see the CR data booklet "Custom-built pumps" in WebCAPS on www.grundfos.com.

The pressure generated by the high-pressure pump makes special demands on the design. This data booklet primarily describes the following aspects where the high-pressure pump differs from the standard pump:

- design
- operating conditions
- performance curves
- dimensions.

The performance curves and dimensional sketches on pages [22](#) to [72](#) show the high-pressure pump connected in series with a standard pump with various numbers of stages.

2. Performance range

TM02 1689 3412

TM02 1687 3412

EuP ready

The CR, CRN, CRNE pumps are energy-optimised and comply with the EuP Directive (Commission Regulation (EC) No 547/2012) which has been effective as from 1 January 2013. As from this date, all pumps will be classified/graduated in a new energy efficiency index (MEI).

Minimum efficiency index

Minimum efficiency index (MEI) means the dimensionless scale unit for hydraulic pump efficiency at best efficiency point (BEP), part load (PL) and overload (OL). The Commission Regulation (EU) sets efficiency requirements to $MEI \geq 0.10$ as from 1 January 2013 and $MEI \geq 0.40$ as from 1 January 2015. An indicative benchmark for best-performing water pump available on the market as from 1 January 2013 is determined in the Regulation.

- The benchmark for most efficient water pumps is $MEI \geq 0.70$.
- The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with the full impeller diameter. The trimming of the impeller will adapt the pump to a fixed duty point, leading to reduced energy consumption. The minimum efficiency index (MEI) is based on the full impeller diameter.

- The operation of this water pump with variable duty points may be more efficient and economic when controlled, for example, by the use of a variable-speed drive that matches the pump duty to the system.
- Information on benchmark efficiency is available at <http://europump.eu/efficiencycharts>.

Minimum efficiency index (MEI)

Pump type	MEI
CR 1	> 0.70
CR 3	> 0.70
CR 5	0.57
CR 10	> 0.70
CR 15	> 0.70
CR 20	> 0.70
CR 32	> 0.70
CR 45	> 0.70
CR 64	> 0.70
CR 90	> 0.70

1) CRN 32 to 150 with HQQE shaft seal: -40 to +120 °C.

2) CR, CRN 120 and 150 with 55 or 75 kW motors with HBQE shaft seal: 0 to +120 °C.

4. Applications

The CR, CRN high-pressure series is a multi-purpose pump range suitable for a large variety of applications demanding reliable and cost-efficient supply.

The CR, CRN can handle a variety of liquids from potable water to industrial liquids within very wide temperature, flow and pressure ranges.

The lists below show some general examples of applications requiring a high pressure.

Pressure boosting

- Process water systems
- washing and cleaning systems
- high-pressure washdown systems
- boiler feed and condensate systems.

Water treatment

- Ultra-filtration systems
- reverse osmosis systems.

Pump

The CRNE-HS is a single-pump solution capable of generating up to 50 bar.

The CRNE-HS pump is a non-self-priming, vertical, multistage centrifugal pump fitted with a high-speed Grundfos MGE motor with integrated frequency converter.

The direction of rotation is the opposite of that of standard pumps, and the chamber stack is turned upside-down. Consequently, the pumped liquid flows in the opposite direction.

This special design ensures that the shaft seal is not affected by the pump outlet pressure.

The base, pump head cover and all components in contact with the pumped liquid are made of stainless steel.

The pump has a maintenance-free mechanical cartridge shaft seal.

Operating conditions

Liquid temperature:	-20 to +120 °C.
Ambient temperature:	Maximum +40 °C.
Minimum inlet pressure:	2 bar.
Maximum inlet pressure:	25 bar.
Maximum operating pressure:	50 bar.

Pump

The CRN-SF is a double-pump system capable of generating up to 50 bar.

The system consists of two pumps connected in series. One pump is a standard pump for feeding, i.e. CRN. The other pump is a high-pressure pump especially designed for high pressures, i.e. CRN-SF. The CRN-SF pump is a non-self-priming, vertical, multistage centrifugal pump fitted with a Grundfos standard motor. The CRN-SF pump is also available with a Grundfos MGE motor with integrated frequency converter. When the pump is fitted with an MGE motor, the pump designation is CRNE-SF.

The direction of rotation is the opposite of that of standard pumps, and the chamber stack is turned upside-down. Consequently, the pumped liquid flows in the opposite direction.

This special design ensures that the shaft seal is not affected by the pump outlet pressure.

The base, pump head cover and vital pump components are made of stainless steel.

The pump has a maintenance-free mechanical cartridge shaft seal.

Operating conditions

Liquid temperature:	-40 to +120 °C.
Ambient temperature:	See page 13.
Minimum inlet pressure:	2 bar.
Maximum inlet pressure:	25 bar.
Maximum operating pressure:	50 bar.

¹⁾ The output frequency of the frequency converter of the motor differs from the standard 50 Hz. In this situation, the frequency is approximately 75 Hz.

Operating range of shaft seal for high-pressure pump

The actual operating range of the shaft seal for the high-pressure pump depends on operating pressure, type of shaft seal and liquid temperature.

The following temperature ranges apply to clean water.

Standard shaft seal	Motor size [kW]	Description	Temperature range [°C]
HQQE	0.37 - 45	O-ring, cartridge, balanced seal, SiC/SiC, EPDM	-40 to +120
HBQE ¹⁾	55-75	O-ring, cartridge, balanced seal, carbon/SiC, EPDM	0 to +120
HQQV	0.37 - 45	O-ring, cartridge, balanced seal, SiC/SiC, FKM	-20 to +90
HBQV ¹⁾	55-75	O-ring, cartridge, balanced seal, carbon/SiC, FKM	0 to +90

¹⁾ Available as HQQE and HQQV on request.

Motor protection

Grundfos MG and Siemens motors

Single-phase Grundfos motors have a built-in thermal overload switch (IEC 34-11: TP 211).

Three-phase Grundfos motors from 3 to 22 kW have a built-in thermistor (PTC) according to DIN 44082 (IEC 34-11: TP 211).

Three-phase motors **must** be connected to a motor-protective circuit breaker according to local regulations.

Grundfos MGE motors

The MGE motor incorporates thermal protection against slow overloading and blocking (IEC 34-11: TP 211).

CRNE pumps require no external motor protection.

Terminal box positions

As standard, the terminal box is fitted on the inlet side of the pump.

TM03 3658 0606

Fig. 9 Terminal box positions

Ambient temperature

Motor power [kW]	Motor make	Motor efficiency class	Maximum ambient temperature [°C]	Maximum altitude above sea level [m]
0.37 - 0.55	Grundfos MG	-	+40	1000
0.75 - 22	Grundfos MG	IE2-IE3	+60	3500
0.37 - 2.2	Grundfos MGE	-*	+50	1000
3-22	Grundfos MGE	IE3	+40	1000
30-75	Siemens	IE3	+55	2750

* Even though the MGE motor (0.37 to 2.2 kW) has no defined efficiency class, the efficiency is still above the IE4 level including both motor and electronics.

If the ambient temperature exceeds the above maximum ambient temperatures, the motor must not be fully loaded due to the risk of overheating.

In such cases, it may be necessary to use a motor with a higher rated output.

Pumped liquids

The pumps are suitable for thin, clean, non-flammable liquids, not containing solid particles or fibres that may attack the pump mechanically or chemically.

The pumping of liquids with a density or kinematic viscosity higher than that of water will cause a considerable pressure drop, a drop in the hydraulic performance and a rise in the power consumption.

In such situations, the pump should be fitted with a larger motor.

Whether a pump is suitable for a particular liquid depends on a number of factors of which the most important are the chloride content, pH value, temperature and content of chemicals, oils, etc.

Please note that aggressive liquids, for example seawater and some acids, may attack or dissolve the protective oxide film of the stainless steel and thus cause corrosion.

If in doubt, contact Grundfos.

Installation altitude

Installation altitude is the height above sea level of the installation site. Motors installed at maximum altitude can be loaded 100 %.

Motors installed above maximum altitude must not be fully loaded due to the low density and consequently low cooling effect of the air.

MG and Siemens motors

Guidelines to performance curves

The guidelines below apply to the curves shown on the following pages:

- Tolerances to ISO 9906:1999 Annex A, if indicated.
- The motors used for the measurements are standard Grundfos MG or MGE motors.
- Measurements have been made with airless water at a temperature of 20 °C.
- The curves apply to the following kinematic viscosity: $\nu = 1 \text{ mm}^2/\text{s}$ (1 cSt).

Due to the risk of overheating, the pumps should not be used at a flow below the minimum flow rate.

The curve below shows the minimum flow rate as a percentage of the rated flow rate in relation to the liquid temperature. The dotted line shows a CR pump fitted with an air-cooled top assembly.

Fig. 13 Minimum flow rate

5. Selection and sizing

Selection of high-pressure pumps

Pump size

Base the selection of pump size on these parameters:

- required flow and pressure at the draw-off point
- pressure loss as a result of height differences
- friction loss in the pipework

It may be necessary to account for pressure loss in connection with long pipes, bends, valves, etc.

- best efficiency at the estimated duty point.

Efficiency

If the pump is expected to always operate in the same duty point, select a pump which is operating in a duty point corresponding to the best efficiency of the pump.

In the case of varying consumption, select a pump with its best efficiency within the duty range representing the highest power consumption, i.e. typically the duty range covering the greater part of the duty time.

Fig. 14 Example of a duty point

Pos.	Description
1	Feed pump
2	High-pressure pump
3	Duty point
4	Best efficiency

Minimum inlet pressure, NPSH

We recommend calculation of the inlet pressure "H" in these situations:

- The liquid temperature is high.
- The flow is significantly higher than the rated flow.
- Water is drawn from depths.
- Water is drawn through long pipes.
- Inlet conditions are poor.

To avoid cavitation, make sure that there is a minimum pressure on the inlet side of the pump. The maximum suction lift "H" in metres head can be calculated as follows:

$$H = p_b \times 10.2 - \text{NPSH} - H_f - H_v - H_s$$

p_b	Barometric pressure in bar. Barometric pressure can be set to 1 bar. In closed systems, p_b indicates the system pressure in bar.
NPSH	Net Positive Suction Head in metres head. To be read from the NPSH curve at the highest flow the pump will be delivering.
H_f	Friction loss in inlet pipe in metres head. At the highest flow the pump will be delivering.
H_v	Vapour pressure in metres head. To be read from the vapour pressure scale. " H_v " depends on the liquid temperature " T_m ".
H_s	Safety margin = minimum 0.5 metres head.

If the "H" calculated is positive, the pump can operate at a suction lift of maximum "H" metres head.

If the "H" calculated is negative, an inlet pressure of minimum "H" metres head is required.

Fig. 15 Minimum inlet pressure, NPSH

Note: To avoid cavitation, **do not** select a pump with a duty point too far to the right on the NPSH curve.

Always check the NPSH value of the pump at the highest possible flow.

Inlet pressure and operating pressure

Do not exceed the limit values stated on pages 8 to 11 as regards these pressures:

- minimum inlet pressure
- maximum inlet pressure
- maximum operating pressure.

Shaft seal

As standard, the CR, CRN high-pressure range is fitted with an HQQE shaft seal suitable for the most common high-pressure applications.

These key parameters must be taken into account when selecting the shaft seal:

- type of pumped liquid
- liquid temperature.

Grundfos offers a wide range of shaft seal variants to meet specific demands.

For proper lubrication of the shaft seal, be sure to note the operating conditions for the pump. See [Operating conditions](#) on page 8.

8. Accessories

PJE couplings

Sets with and without pipe stubs as well as connecting pipe between feed pump and high-pressure pump are available as accessories for pumps with PJE (Victaulic) couplings.

PJE couplings with pipe stub

Materials in contact with the pumped liquid are made of stainless steel EN 1.4401 (AISI 316) and rubber.

A set consists of two coupling halves (Victaulic type 77), one gasket, one pipe stub (for welding or threaded), bolts and nuts.

Coupling	Pump type	Pipe stub	PN [bar]	A	B	Pipe connection	Rubber parts	Number of coupling sets required	Product number

Fig. 18 Connecting pipe

Flange connections

Counter flanges, adapter kit and support blocks are available as accessories for pumps with flange connections.

Counter flanges

A counter-flange set consists of one counter flange, one gasket, bolts and nuts.

Counter flanges for CRN pumps are made of stainless steel according to EN 1.4401 (AISI 316).

Counter flange	Pump type	Description	Rated pressure	Pipe connection	Product number
	TM04 5857 4209 CRN 3 SF CRN 5 SF	For welding	63 bar, EN 1092-1	32 mm, nominal	97504185
	TM04 5858 4209 CRN 10 SF CRN 15 SF CRN 20 SF	For welding	63 bar, EN 1092-1	50 mm, nominal	97504183
	TM03 8892 2707 CR 120 CR 150	For welding	40 bar, EN 1092-2	125 mm, nominal	96750475
	TM03 8891 2707 CR 120¹⁾ CR 150¹⁾	For welding	40 bar, EN 1092-2	150 mm, nominal	96750476
	TM03 8891 2707 CRN 120¹⁾ CRN 150¹⁾	For welding	40 bar, EN 1092-2	150 mm, nominal	96750478

¹⁾ CR, CRN 120 and 150 pumps are supplied with DN 125 flanges as standard.

Adapter kit

DN 150 flanges are available for CR, CRN 120 and 150 pumps. To use DN 150 flanges, two adapter kits must be ordered per pump.

Adapter kit	Pump type	Pipe connection	Number of flange kits required	Product number
	CR 120 CR 150	150 mm, nominal	2	96638169
	CRN 120 CRN 150	150 mm, nominal	2	96638180

Support blocks

The vertical height from the bottom of the base to the centre of the connection port is higher on CRNE-HS and CRN(E)-SF pumps with flange connections than on standard CRN pumps.

When a CRN-SF pump (high-pressure pump) is connected to a standard CRN pump (feed pump), the difference in height will cause a misalignment. The misalignment can be eliminated by fitting support blocks to the standard pump.

The following support blocks are available as accessories.

Pump type	Height of support blocks [mm]	Product number
CRN 3 SF CRN 5 SF	10	97528978
CRN 10 SF	25	97528980
CRN 15 SF CRN 20 SF	15	97529002

Tri-Clamp connections

Sets with pipe stubs are available as accessories for pumps with Tri-Clamp connections. A set consists of one clamping ring, one pipe stub and one gasket.

Pump type	Nominal diameter [mm]	Clamping ring		Pipe stub				Gasket		Number of connection sets required	Product number
		A [mm]	B [mm]	A [mm]	B [mm]	C [mm]	D [mm]	A [mm]	B [mm]

Pressure sensors for CRNE-HS

Danfoss pressure sensor kit, consisting of

- Danfoss pressure transmitter, type MBS3000, with 2 m screened cable
Connection: G 1/2 A (DIN 16288 - B6kt)
- 5 cable clips (black)
- Instruction manual PT (00400212).

Pressure range [bar]	Temperature range [°C]	Product number
0-40	-40 to +85	96483573
0-60		96483574

LiqTec

A LiqTec dry-running protection unit protects the pump and process against dry running and temperatures exceeding $+130\text{ °C} \pm 5\text{ °C}$.

Connected to the motor PTC sensor, the LiqTec also monitors the motor temperature.

The LiqTec is prepared for DIN rail mounting in control cabinet.

Enclosure class: IPX0.

9. Grundfos Product Center

Online search and sizing tool to help you make the right choice.

<http://product-selection.grundfos.com>

"SIZING" enables you to size a pump based on entered data and selection choices.

"REPLACEMENT" enables you to find a replacement product. Search results will include information on the following:

- the lowest purchase price
- the lowest energy consumption
- the lowest total life cycle cost.
